Education	University of Central Florida <i>Bachelor of Science in Computer Science</i>	Orlando, FL May 2020
Skills	Programming: Swift, Objective-C, Bash, Ruby, Python Frameworks: SwiftUI, UIKit, Swift Testing, XCTest, App Intents, Foundation Models, Core Bluetooth, Core Location, Vapor, Core Data, ARKit, Vision Technologies: Xcode, SwiftPM, Claude, GitHub Actions, DevCycle, Git, Postman, Proxyman	
Experience	Royal Bank of Canada <i>Senior Mobile Software Engineer, iOS</i>	Orlando, FL Aug 2022 – Present
	○ Led the architectural design and hands-on development of a ground-up rewrite of RBC's innovation app, RBC Launch, creating a modular, scalable system with feature-flag and A/B testing capabilities ○ Technical lead and primary developer on 5 Swift Packages, setting team-wide MVVM + Clean Architecture standards with 80% Swift Testing coverage across domain, data, and view-model layers ○ Built the SwiftUI layer on Swift 6 structured concurrency and @Observable, bridging existing UIKit views through UIViewRepresentable and UIHostingController to reuse proven components ○ Implemented on-device intent detection for Offer Search using Foundation Models with an embedding model; proposed and added App Intents support for Siri, Shortcuts, and Spotlight ○ Partnered cross-functionally from early project planning through delivery - shaping UI / UX with designers, negotiating API contracts and feasibility with backend teams, and driving solutioning and implementation details with other iOS engineers ○ Managed a 4-person iOS team, setting coding and code review standards and automating workflows ○ Mentored an intern through recurring sessions on Swift, architecture, testing, and best practices with regular code reviews, leading to a full-time iOS offer ○ Defined Git branching and release strategy across multiple teams developing in parallel, with automated CI/CD in GitHub Actions for testing, linting, and building ○ Migrated from CocoaPods to SwiftPM, converting 10 mixed-language pods to Swift Packages ○ Prototyped emerging Apple frameworks and presented findings to senior leadership at demo days, converting POCs into funded development initiatives ○ Automated technical design doc to Jira epic and story creation with a Bash/Python pipeline, cutting ticket breakdown from hours to minutes and keeping requirements in sync with the TDD	
	<i>Mobile Software Engineer, iOS</i>	March 2019 - Aug 2022
	○ Designed and implemented reusable UIKit components, networking layers, and extensions, packaged as internal SDKs adopted across 4 teams to accelerate development and standardize design patterns ○ Developed adaptive, accessible UIKit interfaces with Auto Layout adhering to Human Interface Guidelines ○ Improved app performance by implementing concurrency with GCD and Operations	
	<i>Augmented Reality & iOS Development Intern</i>	Nov 2017 - March 2019
Personal	BrewLogger - Specialty coffee logging app	
	○ Live weight streaming over Core Bluetooth from a custom ESP32 scale and firmware I built
